DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Sako et al. (US 6,108,061).

Sako discloses the limitations of:

forming a first conductive film (5, fig. 2) on a first substrate (2, fig. 2);
forming an insulating film (6, fig. 2) on said first conductive film;
forming a thin film transistor on said insulating film;
forming a second conductive film on a second substrate; and
providing a liquid crystal between said thin film transistor and said second conductive film;

wherein said liquid crystal is made monostable by an electric field applied to said liquid crystal by said first conductive film and said second conductive film while ultraviolet rays are applied to said liquid crystal.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sako et al. (US 6,108,061) in further view of Ito et al. (US 5,936,685).

Sako does not disclose the claimed limitation(s) of:

wherein there are gate wirings; and

forming a thin film transistor (TFT) on said insulating film.

However,

a. Ito discloses the above claimed limitations regarding:

forming a thin film transistor (5, fig. 4B) with gate wirings (1, fig. 4A) in column(s) 3, line(s) 35-67.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to combine Ito with Sako, because the TFT allows for better control of the pixels.
